

Mobile **Test** Automation *and* The **Survival** Tips That Actually Work

Baris Sarialioglu

World is Agile!

- **Lines of Code** → Doubles every 2 years
- **Defects per Line of Code** → remains the same for the last 10 years

World is Mobile!

- **90% Data** today, produced in last 2 years.
- **20 billion** connected devices by 2020.

What Happens Online in 60 Seconds? Managing Content Shock in 2016

Many People LOVE Test Automation

86%

Have automation

11% | 12% (2015)

Don't have automation
in their projects

4% | 2% (2015)

Don't know if they
have automation

All in All, Mobile is **just** the Context!

is **Context!**

is **Testing!**

Things you
shouldn't
forget in
Mobile **Test**
Automation

“Carry” Principle

Mobile Phone is always carried

“1 meter” Principle

Mobile Phone is always 1m away

“On” Principle

Mobile Phone is always turned on

“Privacy” Principle

Mobile Phone is not given to anyone

- **50%** of users are **deleting** a Mobile App, for a **Single BUG!**
- **50%** of apps are downloaded and used **just once!**

More than **14.000** Android Devices

- Up to **3 Primary Devices**
(100% of the Test Suite)
- Up to **5 Secondary Devices**
(20-40% of the Test Suite)
- Up to **10 Market Devices**
(5-10% of the Test Suite)

- ➡ one handed—49%
- ➡ cradled—36%
- ➡ two handed—15%

Left Hand

Combined

Right Hand

Description

Pinterest is the world's catalog of ideas. Find and save ideas for parenting hacks, style inspiration and other ideas to try!

Just some of the things you can do with Pinterest:

- Find everyday ideas you love—what to make for dinner, what to put on your walls, what to wear and more ideas for every part of your life.
- Save ideas for later—organize ideas you save by topic, so they're always easy to find.
- Collaborate with friends—save ideas together for your next group trip, party or project.
- Search for an idea even if you don't know what it's called—built-in search guides help point your search in the right direction.
- Save ideas you find around the web—just use the Pinterest's Save button on your mobile browser.

How Good is **too** Good!

| Qualitative | Quantitative |
|--|---|
| Like Easy Awkward slow Squirrel Efficient Ambiguous How Confusing | 23,406 4.3 2m32s 76.8% \$45,849 1,127 3.76% €12.75 |

Subjective

Objective

But still we know that numbers are also, **Relative!!!**

Can my Grandma use this product??

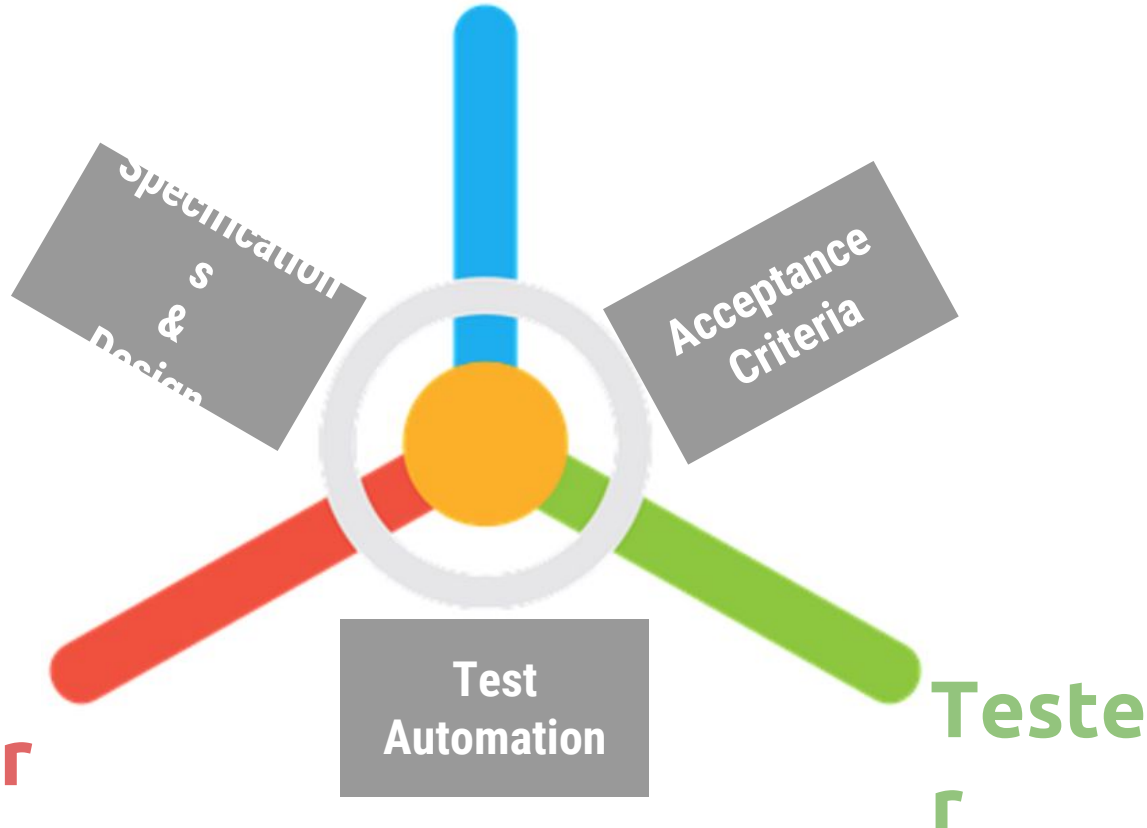

Testing on the Move...

Tips for Mobile **Test** Automation

Business Analyst

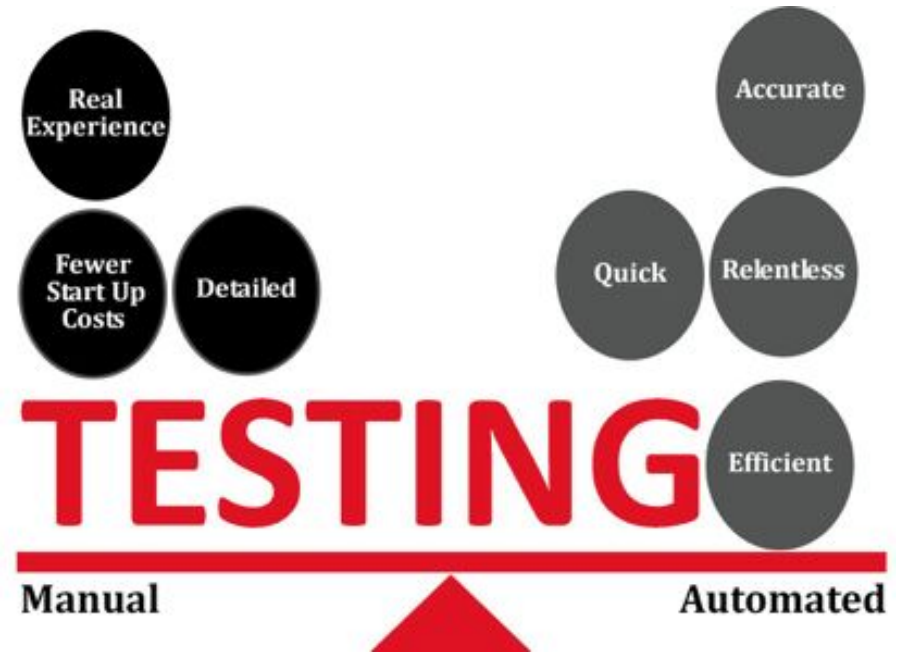

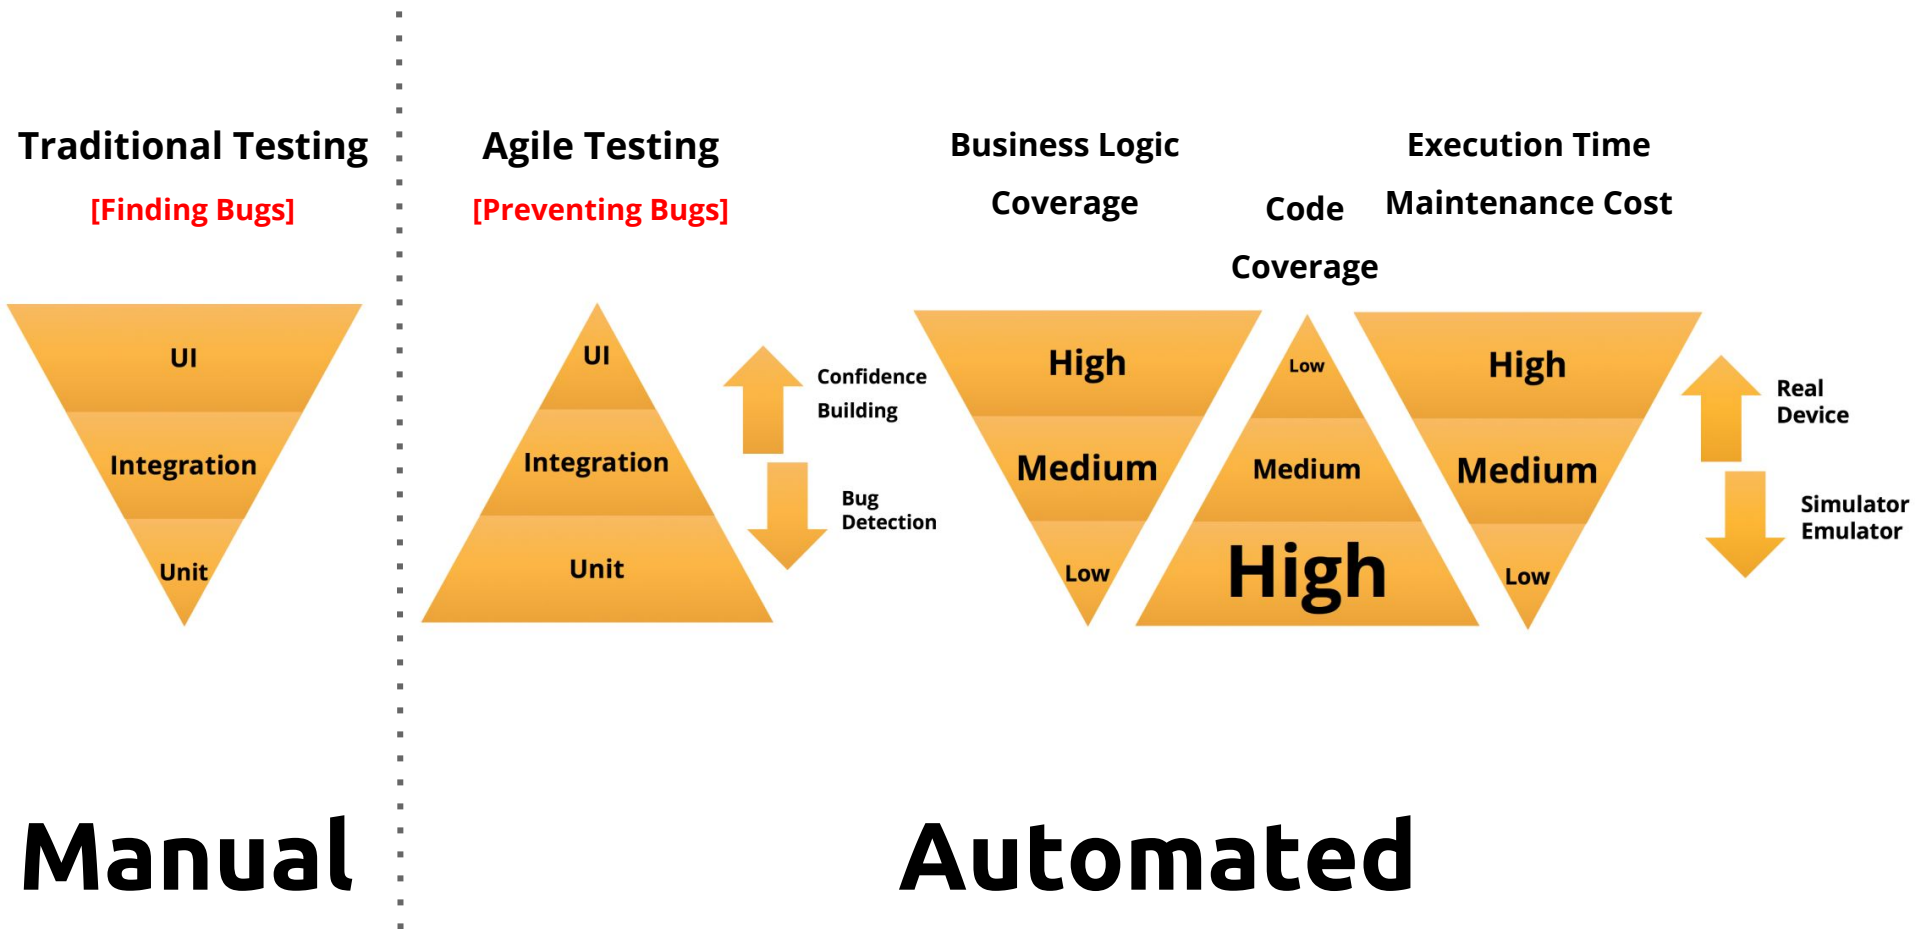

- They are not Developers!
- They are not Testers! (I mean manual testers)
- They don't want to call themselves Testers / Test Engineers
- They are not the most loyal employees! (I mean generally...)
- They get bored quite easily
- They rarely accept criticism
- They are not the best diplomats
- They like generating jargons
- They like over-complicated solutions more than the simple ones

1. Bug Detection vs. Confidence Building
(**Purpose**)
2. Test Execution Period
(**ROI**)
3. Test Execution Time
(**Cost**)
4. Maturity of the Test Object or the Test Code
(**Maintenance Effort**)
5. Real User Feedback
(**User Experience/Observation**)
6. Technical Skills & Technologies Used
(**Test Automation & SW Development**)

WHAT WE HAVE LEARNT WRONG!

MISPERCEPTIONS

Everything should be automated

Test Automation is always better than *or* should replace Manual Testing

Quality is always Quantitative

Test Automation is Software Development

Test Efforts will immediately drop

Tools are not good and we need to buy many mobile devices

MISPERCEPTIONS

WHAT WE HAVE LEARNT SO FAR...

COMMON SENSE

Data-Driven, Keyword-Driven, Model-Based; All is done for maintainability

There is a limit for test automation, even with the most maintainable test code

More automated test cases does not mean you are better testing

Separation of the test code and page specific code (e.g. locators)

Running the test code in parallel & in isolation (e.g. Selenium Grid, Docker)

There is no one way of writing test code, even for the most basic stuff.

COMMON SENSE

WHAT WILL WE SPEAK ON...

FUTURE

- **Code Size (lines of code, LOC)** (Less)
- **Repeated Code** (Low)
- **Cyclomatic Complexity** (Low)
- **Call to Page Objects, Assertions** (More)
- **Locators, Static Wait Calls** (Accurate, Less)
- **Comment Frequency (Easy to Read/Analyze)** (More)
- **Number of Function Calls** (Less)
- **Number of Nested Levels (Decisions)** (Less)
- **Number of Conditions** (Less)
- **Level of Indentation (code blocks)** (Accurate)
- **Coupling** (Low) (Degree of modules rely on each other during execution)
- **Cohesion** (High) (Degree of which a module is focused on single task)

Test Code Quality
Matters

Quality (Test Budget) not always flow from top...
You should know When to **spend** it, When to **save** it and, How to **ask** for it!

Larson

Aristotle

- On a routine manner, review people's test code.
- On a routine manner, ask people to review your test code.
- Learn Software Testing Concepts.
- Collaborate with Testers in your department.
- Do not automate to show-off.
- Try to use widespread technologies and solutions.
- Base your test code on **SOLID / GOOD** test design
- Learn how to configure mobile devices & how they behave.
- Capture their characteristics & differentialities.
- Try to understand the app store & the ecosystem.
